

Angara A5

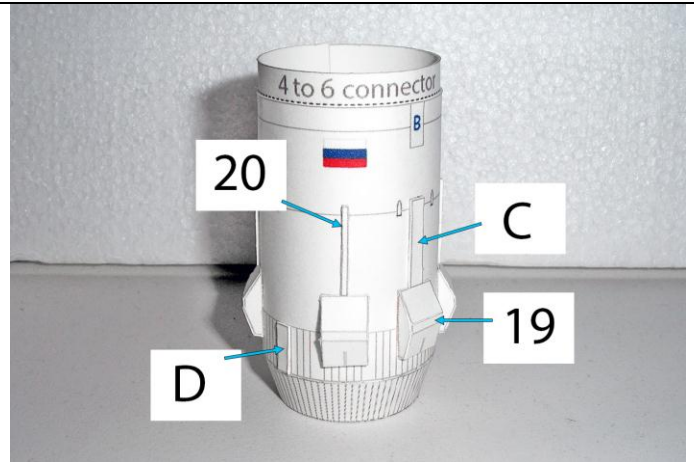

1/120 Scale paper Model Instructions

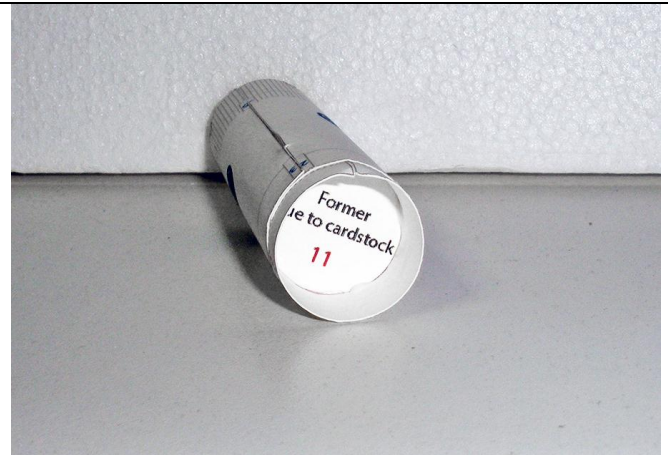

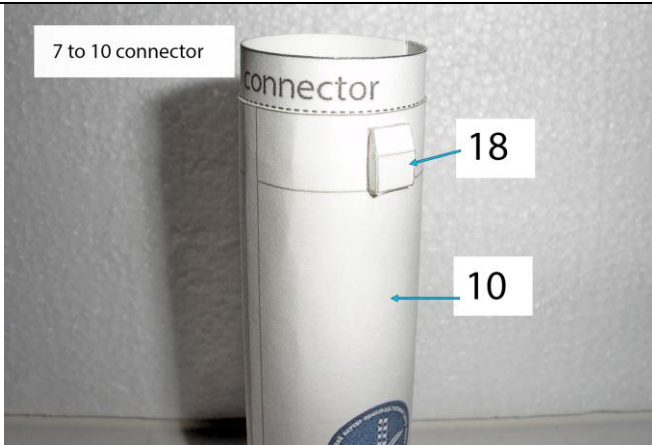

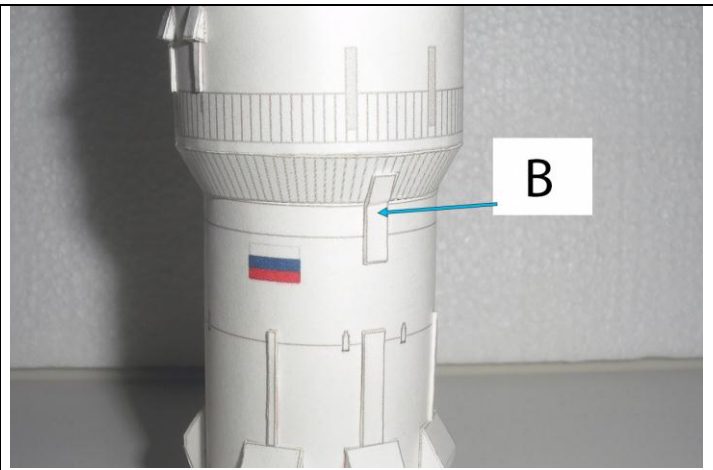

Important Note: Must align all seems during assembly for best results.

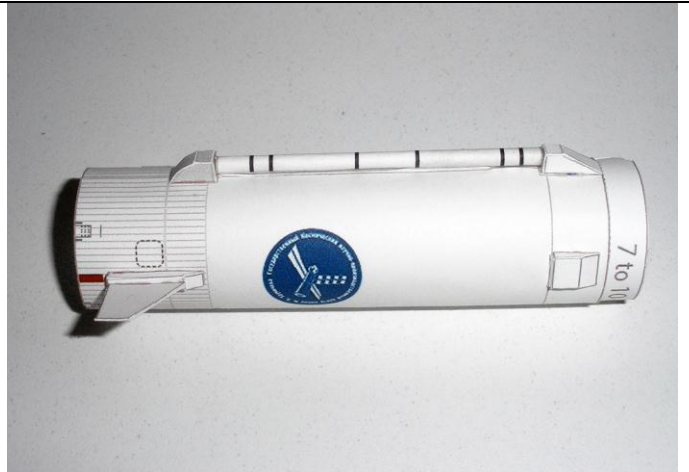

22 is glued on the lines below 21.

Glue onto the labeled areas on part 6

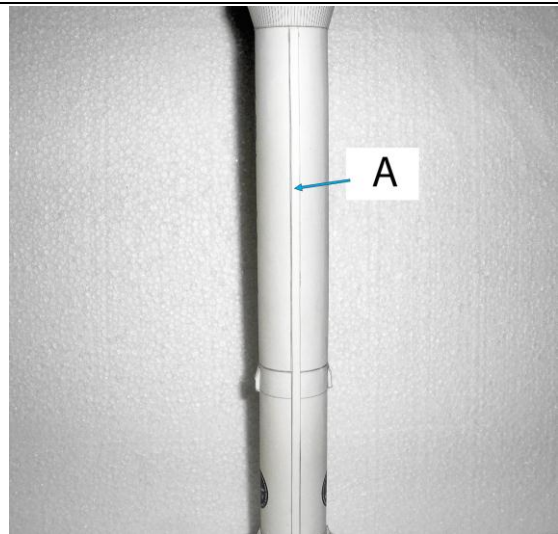

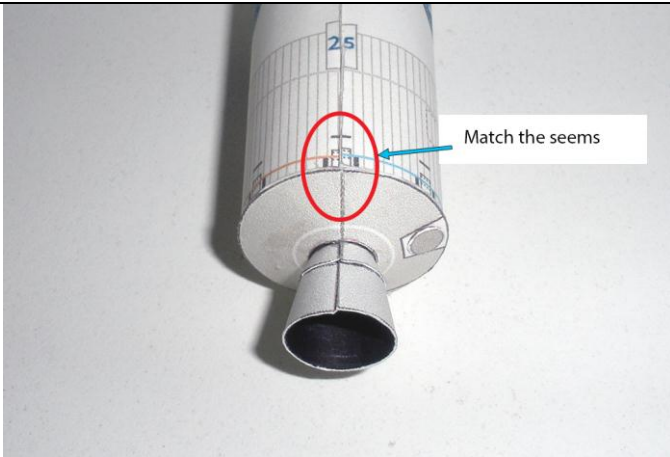

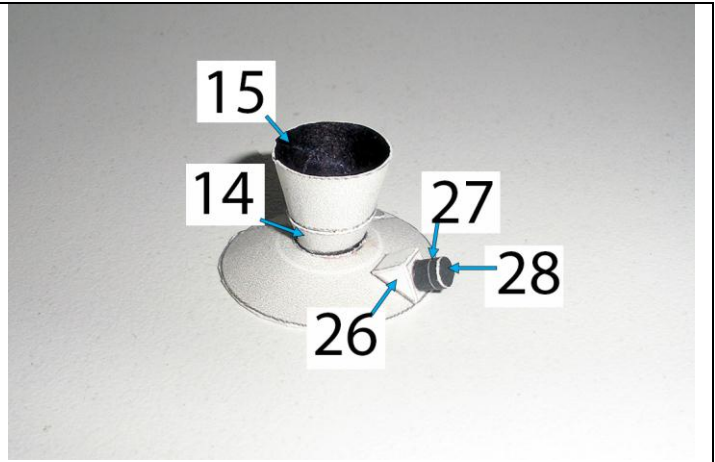

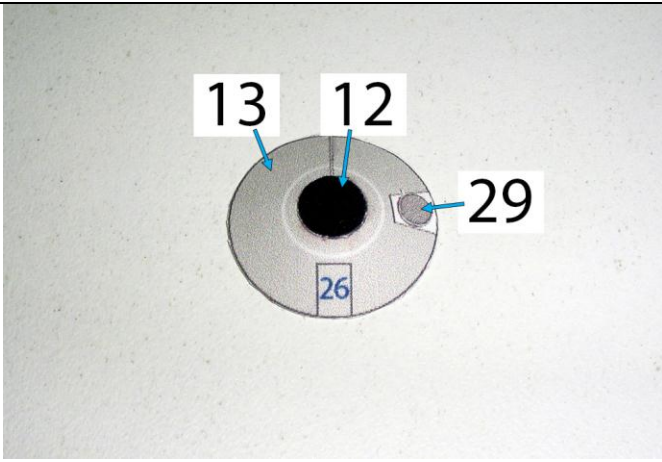

glue on the labeled areas on part 10. With the angled end to the top.

Glue 25 on first, glue 24 onto 23, then glue on the body against 25.

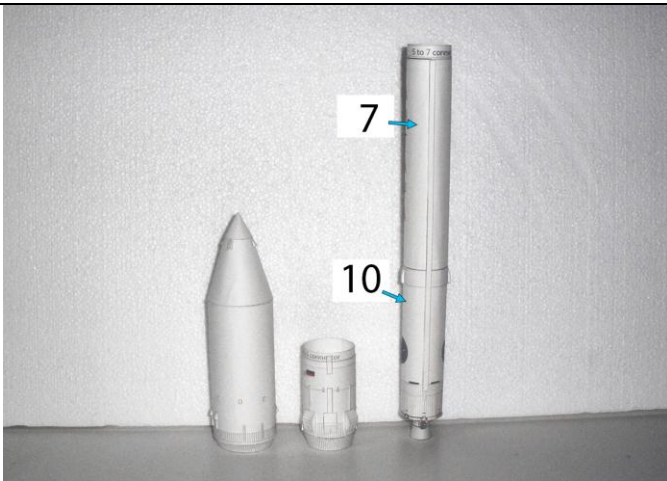

To roll 24 to a skinny tube, slightly moisten the back, roll using a toothpic.

Don't worry about the fins, these photos were from Angara 1.2 model, but part 10 is the same here.

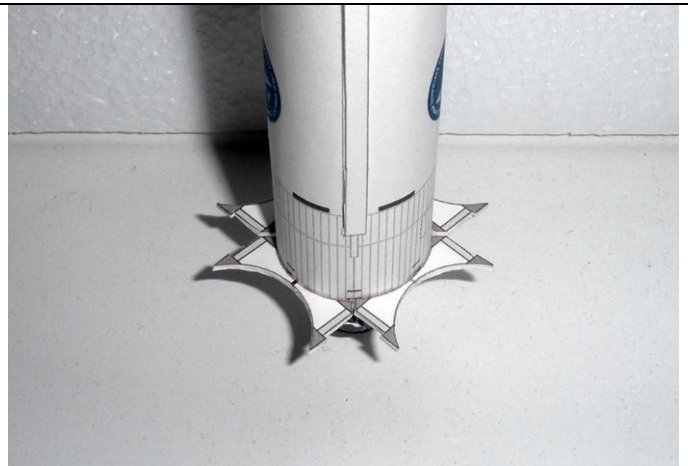

Glue to bottom of 10, match the two seams.

Glue 7 on top of 10 while aligning both seams, glue part A on the labeled area.

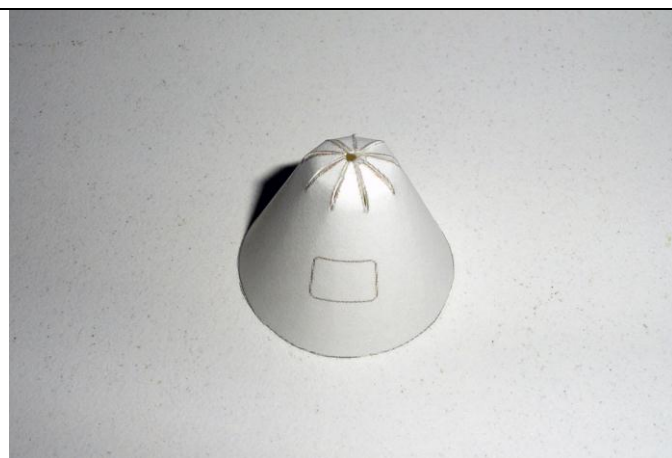

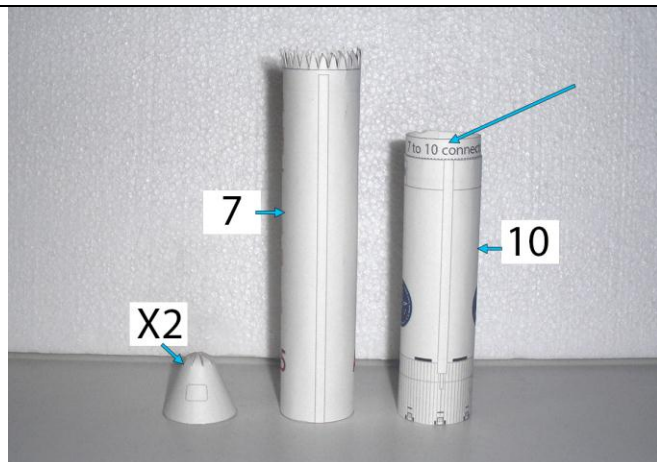

Should have these three pieces.

Prepare the Booster Brackets according to instructions on page 4 on the parts file.

Glue on the colored lines on the bottom of part 10. Match the color on the bracket to the same colored lines. Do the same at the top of part 7. They should be very close to touching each other.

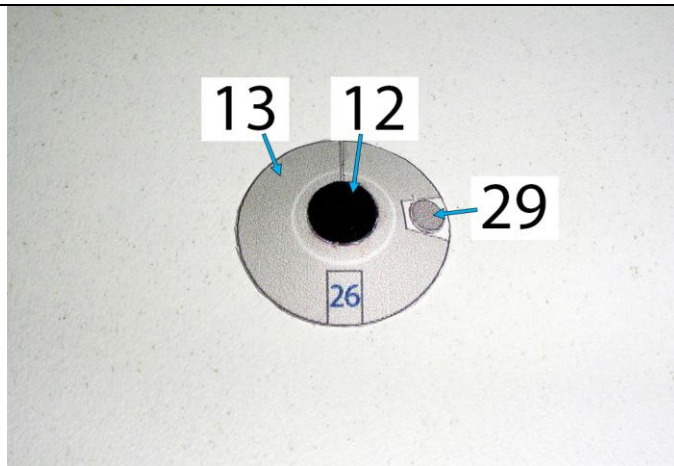

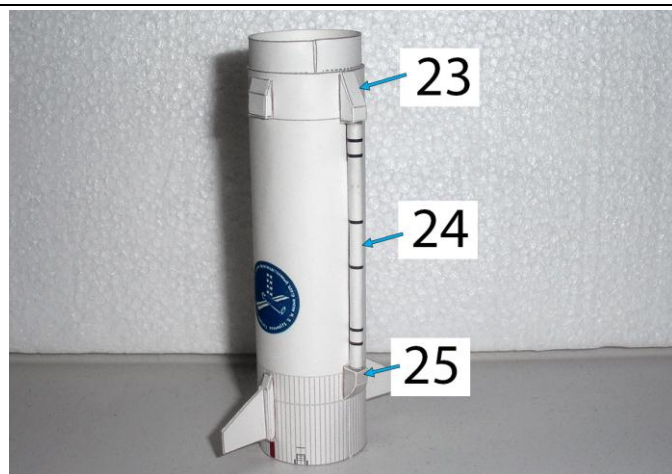

Boosters – make four of these – they are almost identical to the core you just built

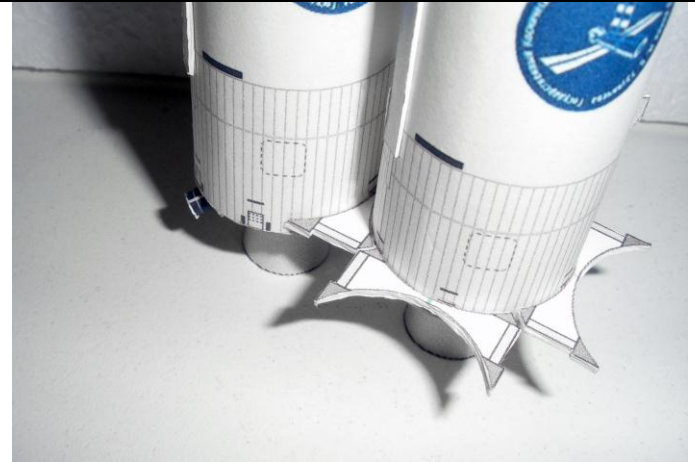

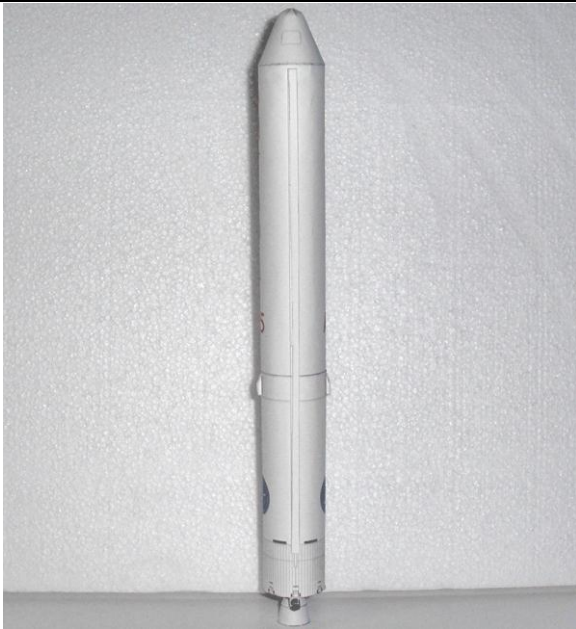

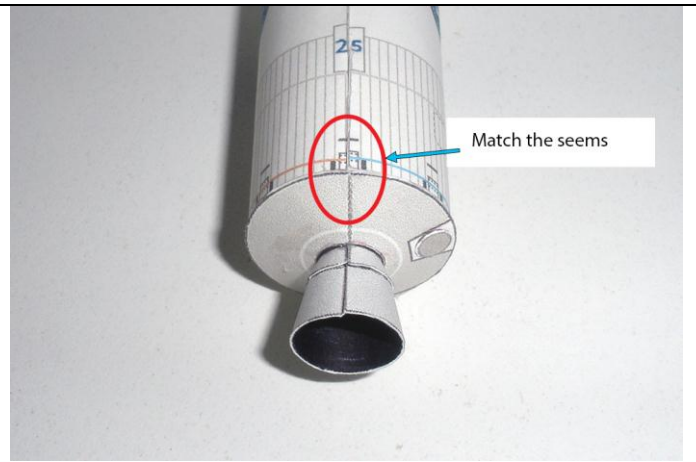

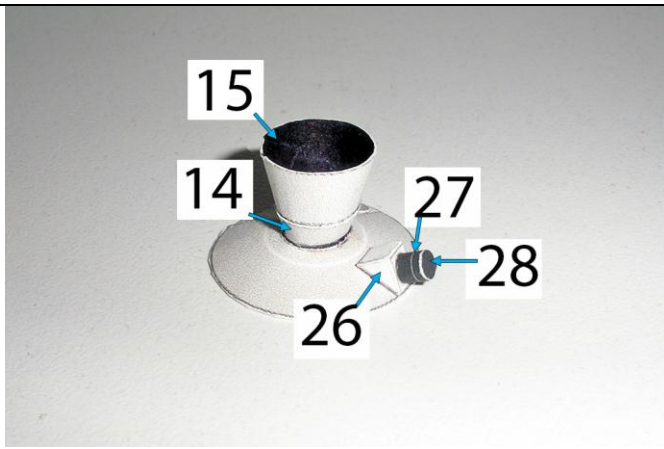

Round the top like this, I like to add elmer's glue inside to help hold its shape.

Glue the nose cone on top of part 10.

Glue onto the core.
Glue the colored line on the booster to the bracket with the same colored marker on the core both top and bottom.

Glue 7 on top of 10 while keeping seems aligned. Glue part A in place.

Glue the two top pieces together while aligning the seems. Glue on top of the core while aligning the seems.

Your model is done.
