

Huygens

1/15 Scale Paper Model Instructions

Glue parts 1 back-to-back and parts 2 back-to-back – match the black markers on each.

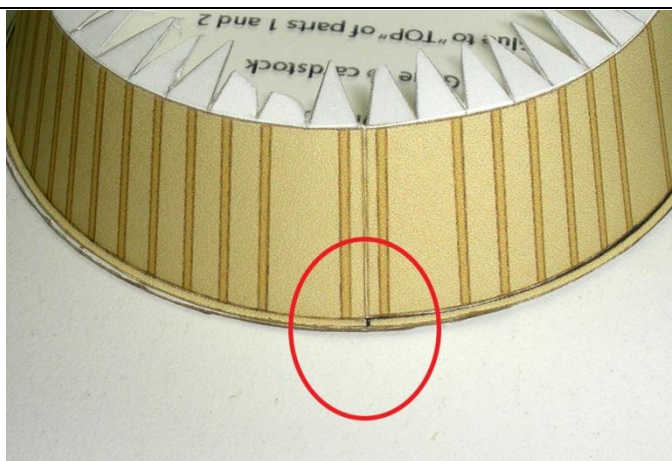

Glue part 5 (Part locator) to the TOP side on part 1 as shown. This will help glue part 7 on top easier.

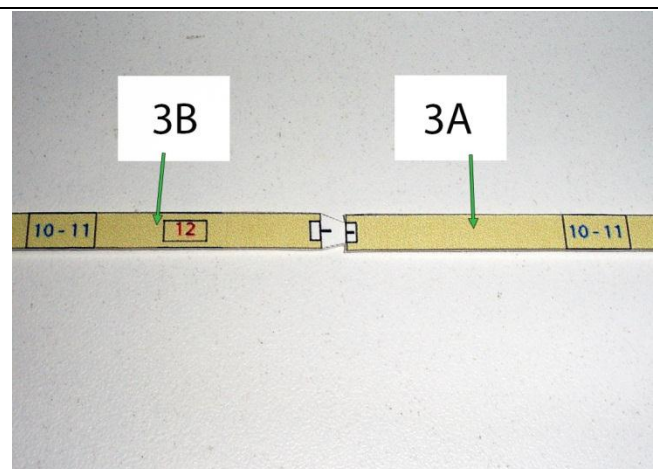

Part X (Found on the last page on the parts file) is a last minute addition to the model. Glue to the TOP inside of part 7 using the glue tabs to hold in place. This will make gluing the TOP (part 6) a lot easier and will look better.

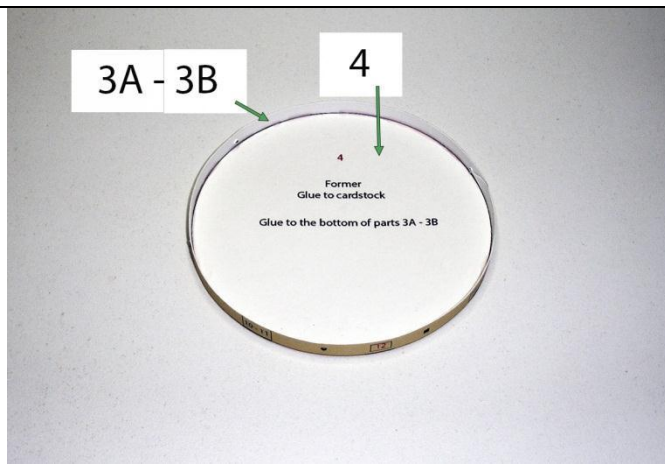

Add some glue around the edge of part 5 (part locator) and glue part 5 around the locator onto the TOP side of part 1. Part X not shown here.

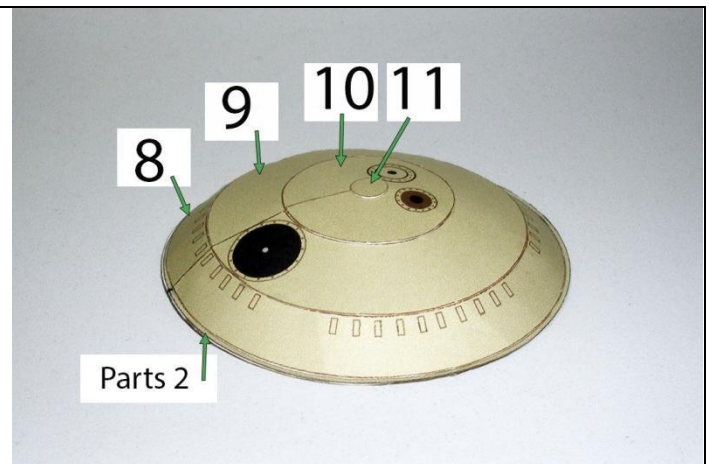

Match the seem on part 7 to the marker on parts 1. This is the top half, set this off to the side for a while.

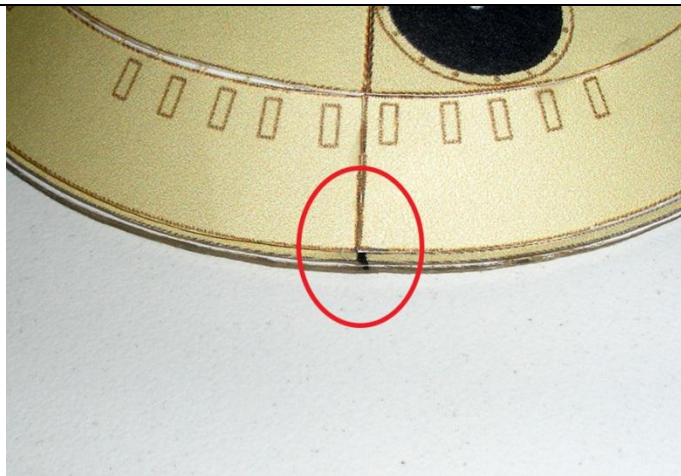

Poke small hole on the three black dots first.
Match the two markers together. Glue into a ring.
The ring will have two seems, one with the thick red line, this is the important seem to watch for.

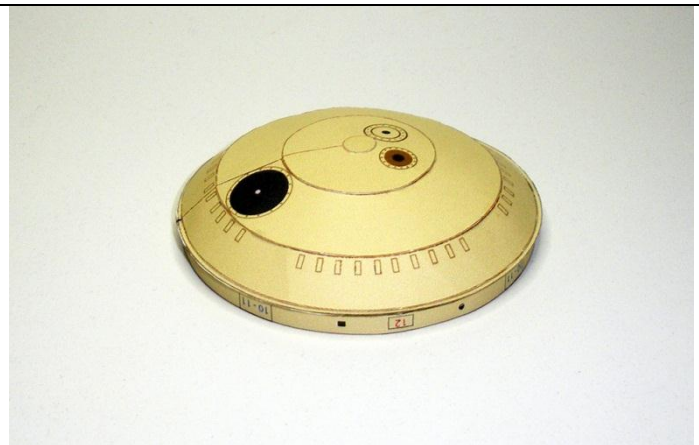

Glue part 4 to inside bottom of the ring.
Important; numbers on the ring must be upright, not up-side-down

Glue part 8 – 11 onto the side labeled 'BOTTOM' on parts 2.
Must match seems on 8 – 11 as shown.
This is the bottom half.

Match seem on part 8 to the marker on the bottom

Glue the ring and former (parts 3A-3B and 4) to the other side labeled 'bottom middle' with the former against the bottom, in this photo, the numbers on the ring is up-side-down.

Important: Must match the seem with the thick red line on the ring to the marker as shown.

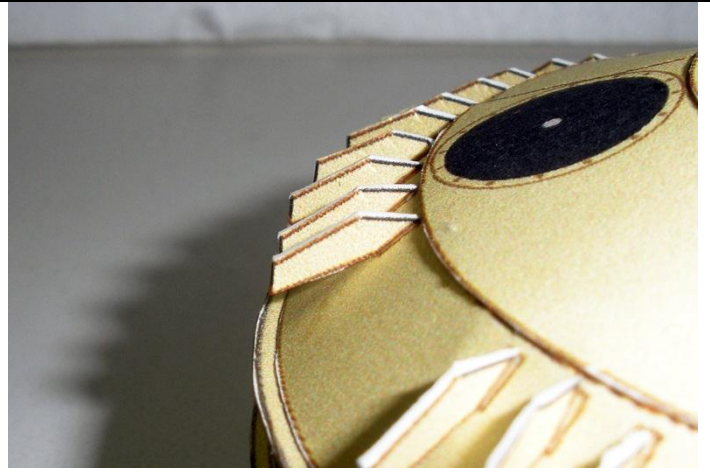

Glue the top half onto the ring, must match the seem on part 7 to the seem with the thick red line and seem on part 8 together as shown.

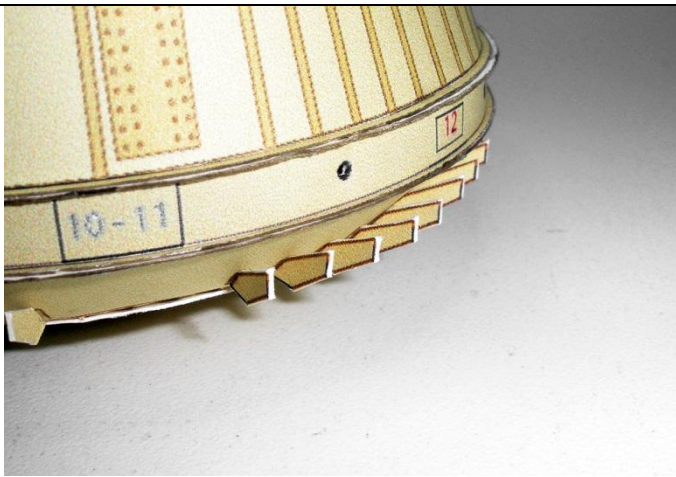

As you can see, all seems and markers on top, middle and bottom halves must be together for all other parts to be in proper locations.

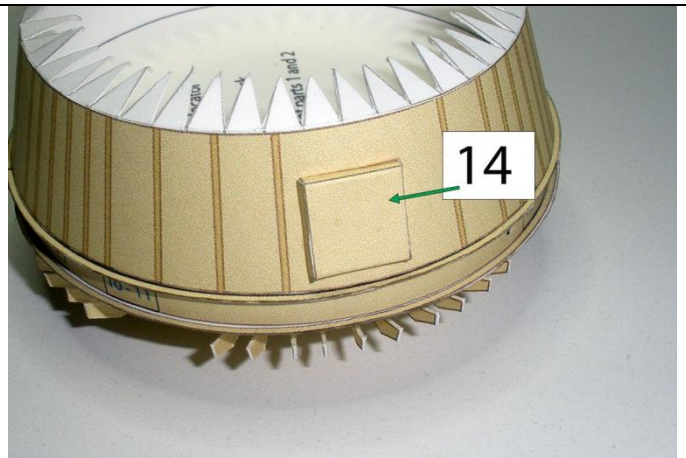

If you turn the model right-side-up, the numbers on the sides should be right-side-up as well.

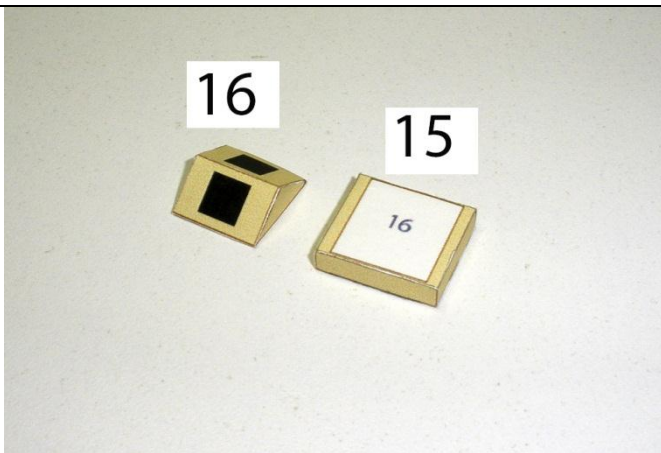

Glue parts 33 in the middle of each rectangle on the bottom as shown.

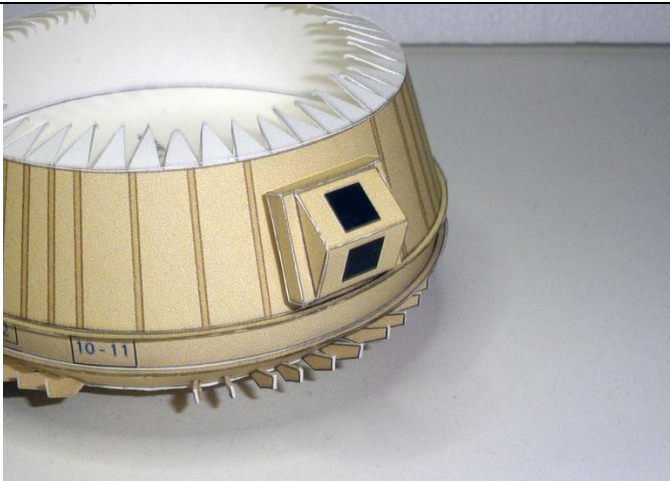

another view

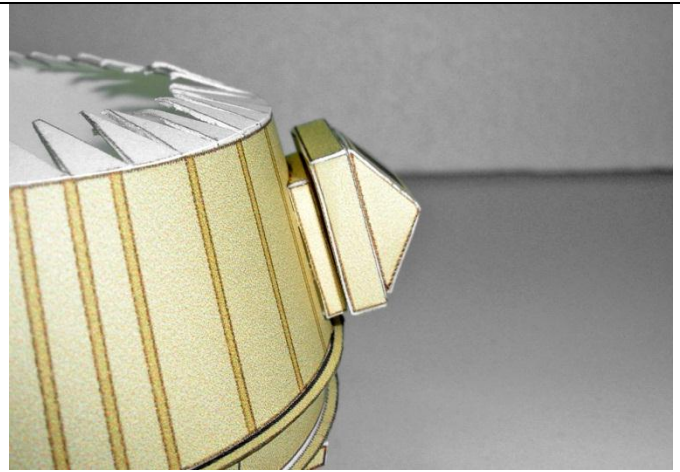

Glue on the labeled area on th side.

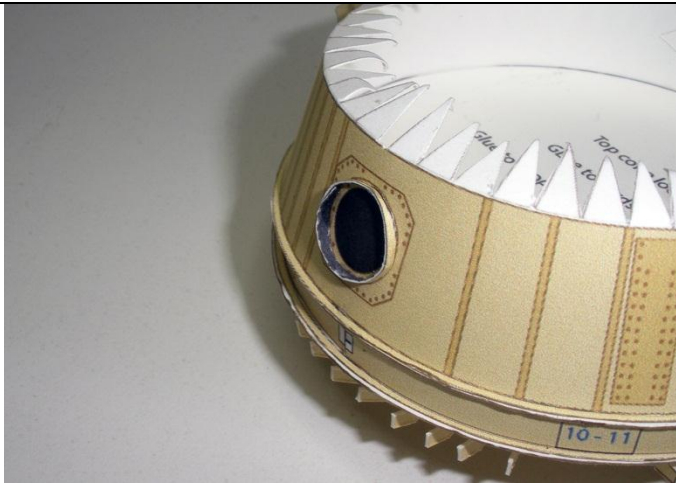

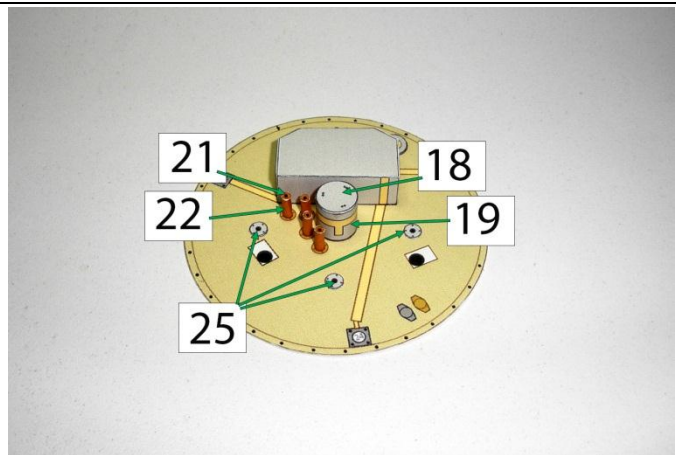

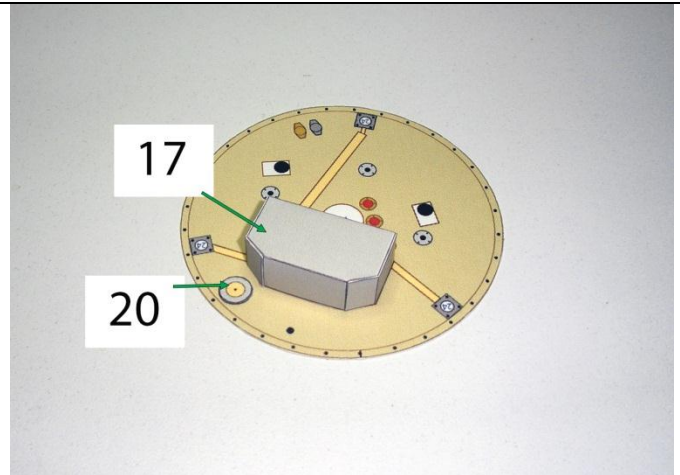

Glue onto part 14

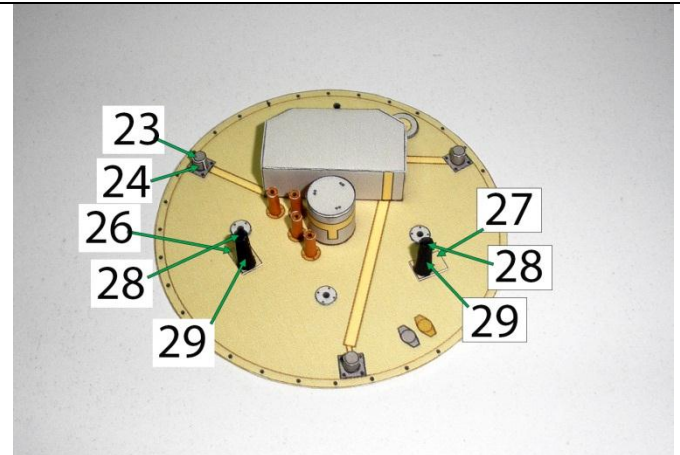

should look like this

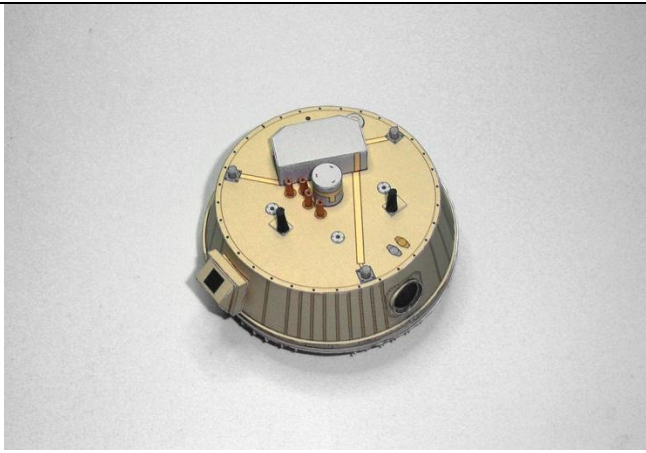

Part 13, glue around the black circle, size was corrected on your model.

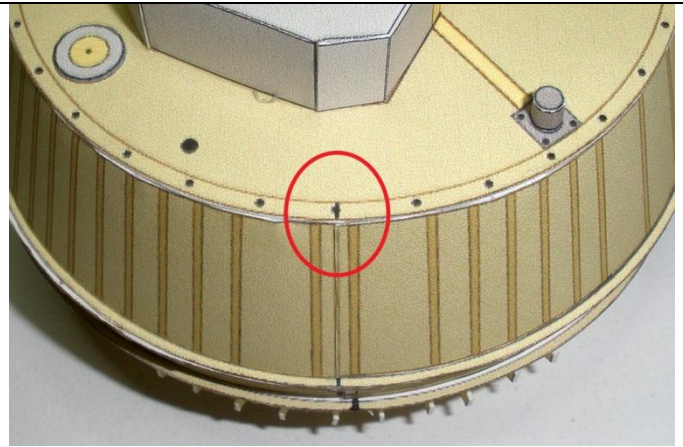

Glue all these onto part 6

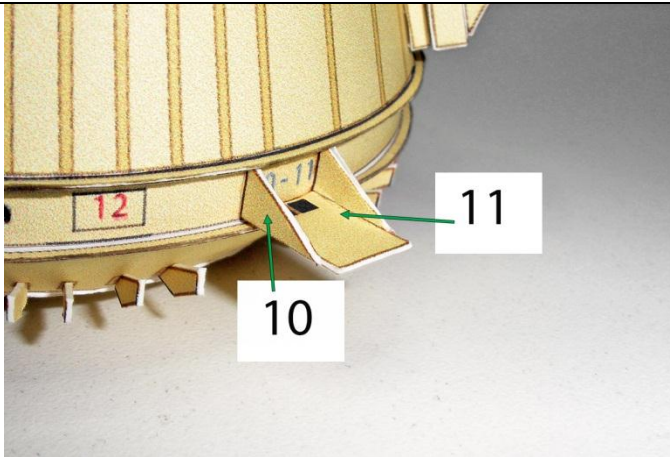

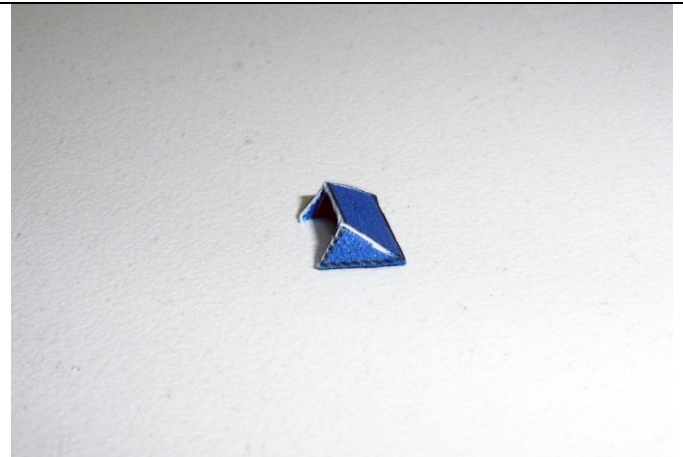

Glue onto the top.

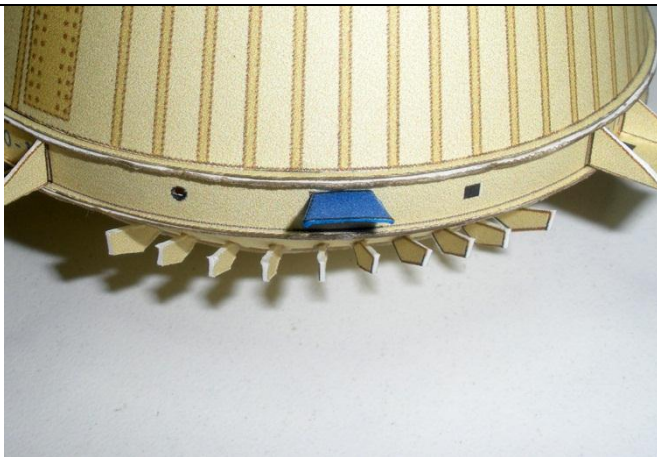

Match the marker on part 6 to the seem on part 7.

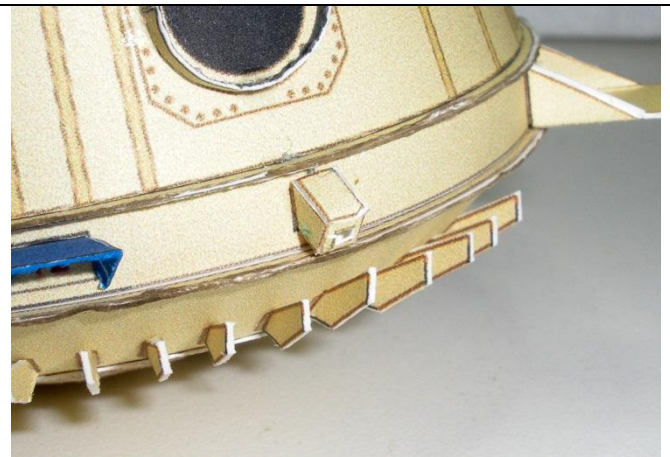

Glue onto the four rectangles labeled "11" on the side.

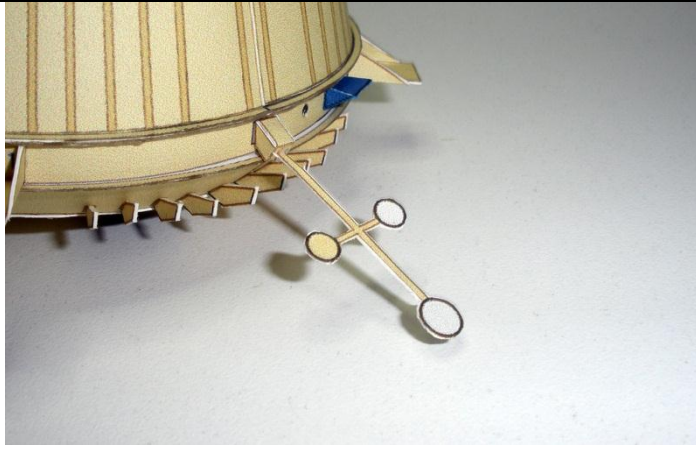

Part 12

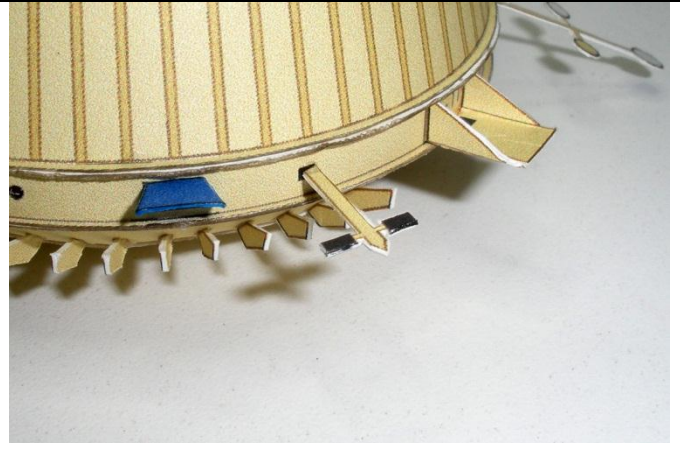

Glue onto the three squares labeled "12" on the side.

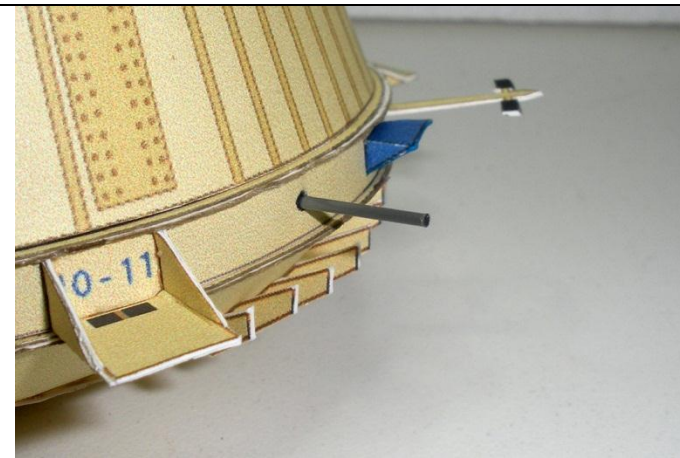

Part 30, cut out the small blue square before gluing together on onto the two squares on the side, The squares are located on both seems on the the middle ring. Glue with a downward angle as shown.

Prepare parts 31, slide each into the small hole on parts 30 and glue in place, Should have the same downward angle as part 30 as shown.

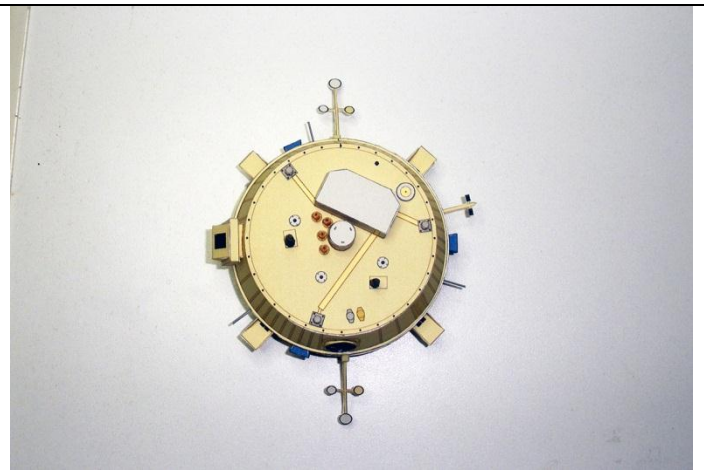

Part 32, glue on the small black square facing straight out.

Prepare the three antennas according to instructions on page 3 on the parts file, glue into the small holes over the three black dots as shown.

Note:
Included with the model are parts 34 – optional detail parts. Glue each at center of each of the 43 dark thick lines on the upper conic (part 7).

If your model looks exactly like this, congrats, your model is done.
