

GeneSat-1

1/3 scale paper model instructions

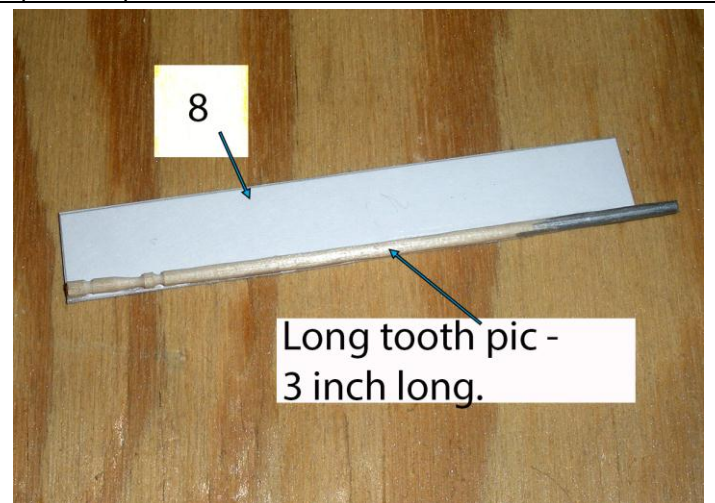

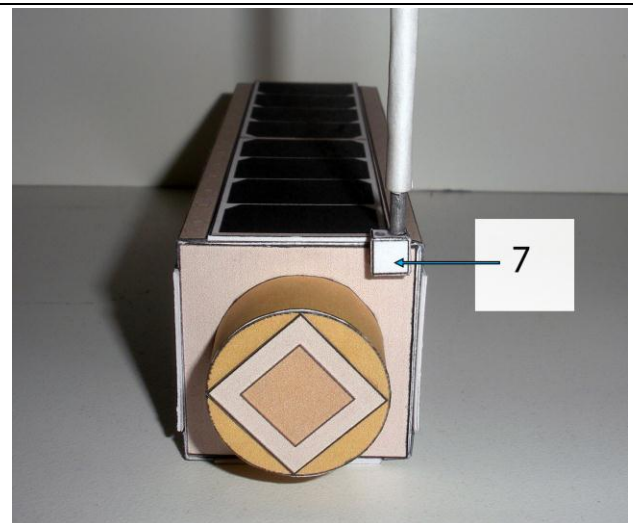

Part 4 fits inside the ring to insure roundness. Glue 5-6 on top where part 4 is.

Match one of the corners on the square part with the seem on part 3. Glue to the body with the seem at the bottom.

Color one end of the long tooth pic grey. Glue this on the edge of part 8 as shown, let dry. Around 5mm should extend from one edge of part 8. Slightly moisten part 8 and roll tightly on the tooth pic and glue in place.

Glue the solar panels onto the body. Glue 7 on the body with the black dot to the right. Glue the antenna on the black dot.

Your model is done, enjoy.
