

SkySat 4-21

1/16 Scale Paper Model Instructions

NOTE:

SkySat 4-21 are the other 19 satellites that are modernised C Generation satellites, they are all identical with each other. This one model represents all of them.

Parts 5-9 should be glued thick cardstock, color edges black. Glue the solar panels on the labeled areas on Part 1, 2 and 4. Parts 11 and 4 are glued back-to-back.

Glue X on the circle on the bottom, then glue 13 inside X.

Close the box, leave one side open (Part 2). Install the riser as shown (no need to glue in place).

12 and 20 are rolled with color INSIDE.

23 (Legs) are glued on the white lines on 21. Install 17, 18 first, then glue the 21-23 assembly in place. legs are glued on the lines on Part X2.

Glue on top of the riser.

Glue 3, 10, 12, 20 assembly as shown, match the two red markers.

Match seem on 28 to the markers on 26.

Straight edge of 31 and 32 are wrapped around the outer perimeter of 30.
Start from one side and work around to the other side.
Make two of each.

For added detail, paint plastic broom straw sliver or grey, cut four pcs at 3mm long each, glue on the small grey dots on 30 (See above).

Parts 16 is glued on the BLUE LINES on 24 with an outward angle.

Legs slides through the two slots on 14, glue in place.

Fold the hinges 90 degrees.
Place the top assembly onto the top of the satellite with the dish inside.
Make sure everything is straight and glue the hinges in place.

Congrats, your model is done.
