

Vanguard 3

1/10 Scale Papermodel Instructions

NOTE: Model used on these instructions was a test model, the final one will look a little different.

Match all seems together.

Poke small pin holes onto the four black dots on Part 6 for the antennas

Very Important: Do Not glue parts 1 – 2 (top) and 7 – 8 (bottom) onto the model yet.

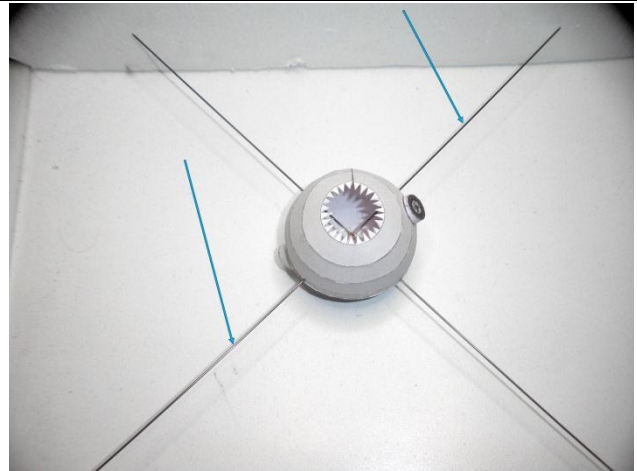

Next steps are important...

Cut out a 10-inch long music wire or stiff wire around 1 mm diameter according to instructions on page 3 on the parts file. Slide into one hole and out the other as shown.

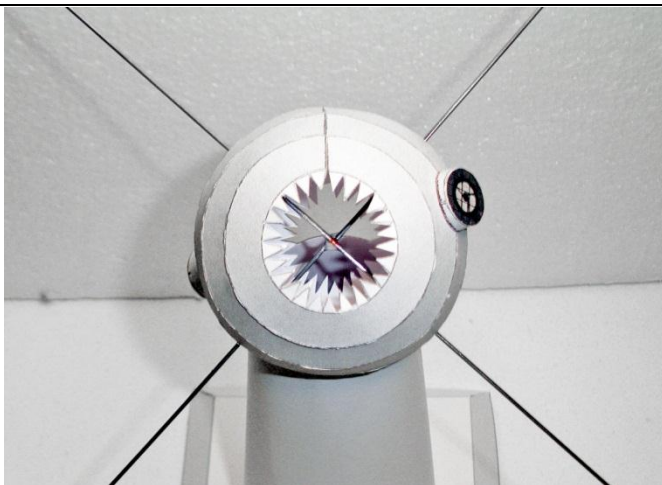

NOTE: Ignore the two photo cells seen on this demo, they are not part of this model.

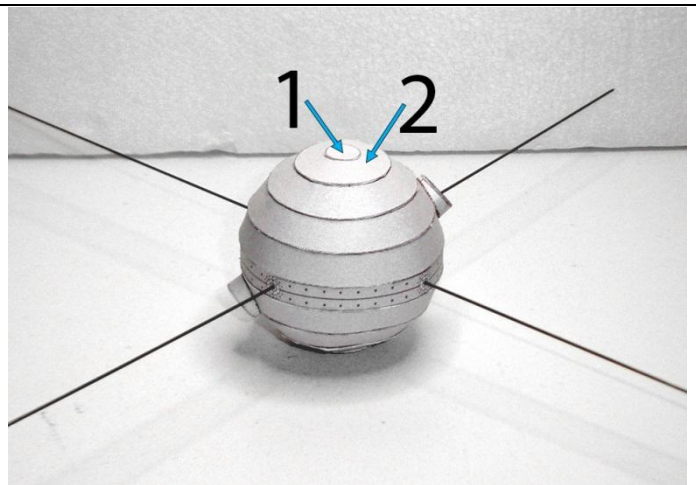

Make sure that each part of the antennas extends out of the model the same length (around 4 inches) and that the marker on the middle of the wire is at the center inside as shown (red circle) and glue in place.

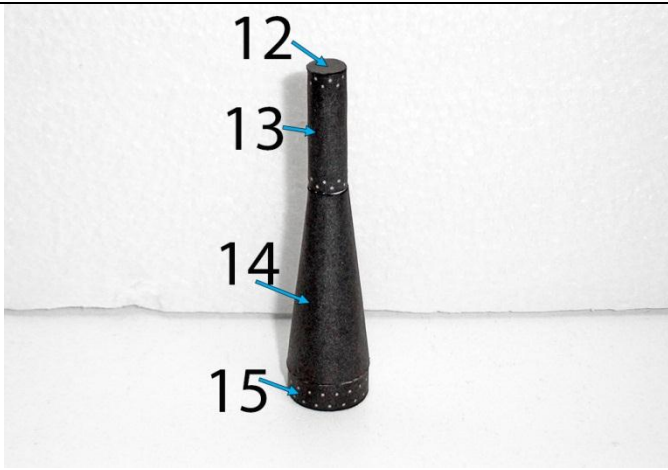

Slide two 5-inch antennas into the other two holes.

Glue the ends onto the marker inside as shown.

Glue Parts 1 – 2 onto the top and Parts 7 – 8 onto the Bottom.

Keep all seems together

Glue on the TOP on the grey circle on part 2.
Roll Part 7a to a ring and glue onto the black circle on the bottom on part 7.

Your model is done.
